

Optical Fiber Cleaning Kit (CK-01)

The presence of dirt, dust, oil, and other contaminants can cause substantial attenuation, (signal loss) or in some cases completely block signal transmission with connectors, adapters, attenuators, and pin/socket termini. Correctly cleaning a fiber optic connection is the first step to assure a low loss fiber optic signal anywhere along the network to your customer's location. Our supplies the tools you need to quickly clean connectors and ports. Proprietary Combination Cleaning process give you clean connections every time.

Features

- Rugged carry case for long life.
- All components are available individually for kit replenishment.
- Ideal for carrying and storing cleaning products.
- High quality cleaning products.
